

## HEALTH OUTCOMES and PHARMACOECONOMICS (HOPE)

THE ACORN Data Warehouse includes PROs from The PACE System™ electronically linked to billing, laboratory, and EMR systems. As such, it provides a robust environment for the study of patient outcomes and cancer treatments. ACORN's team of scientists and biostatisticians augment this data with insightful interpretation for powerful intelligence gathering capabilities.

### Health Outcomes

ACORN provides analysis on PROs, Treatment Patterns, Disease Outcomes, and Adverse Events. Furthermore, we have the capability of digging deeper with chart reviews and in-depth provider and patient interviews across our network. ACORN Health Outcomes Research includes:

### Retrospective Chart Review Studies

- Incidence of hypersensitivity adverse events including infusion reactions
- Reasons for treatment delays and discontinuations

### Prospective Studies

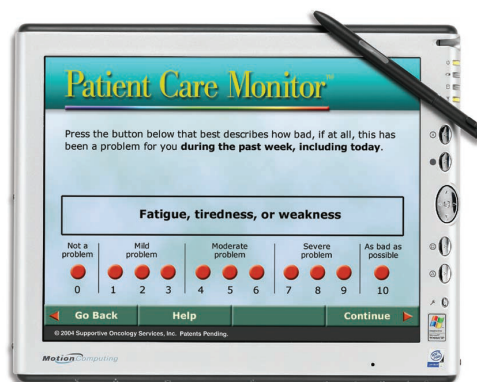

- Capability to monitor and document patients while undergoing treatment and collect specific information
- Custom surveys address specific client questions

### Pharmacoeconomics

ACORN provides clients with reimbursement and economic information that extends well beyond typical drug trend analysis. Specifically, the ACORN approach analyzes the practice economics of oncology drugs and services, taking into account the direct and indirect costs associated with these items, with a unique capability in human resource analysis.

*“HOPE delivers relevant scientific and business intelligence gathering capabilities.”*

Edward J. Stepanski, PhD  
Chief Operating Officer  
ACORN Research, LLC

### Retrospective Patient CareMonitor™ (PCM) Database, Billing Database, Lab Database Studies

- Studies of effects of regimens on symptoms
- Drug | regimen usage patterns
